1. Project Title

LifeArcPlan – Integrated Financial Life Planning Platform

---

2. Project Introduction

LifeArcPlan is a comprehensive financial planning platform designed to help individuals and financial advisors manage all aspects of financial life planning in one centralized system.

The platform combines financial data management, retirement forecasting, investment planning, tax preparation support, and document management into a unified workflow. It allows users to organize their financial information, plan long-term goals, and collaborate with advisors while maintaining a complete record of their financial journey.

LifeArcPlan focuses on life-stage financial planning, helping users structure their finances around key life events such as retirement, education funding, healthcare needs, and wealth transfer.

---

3. Problem the Project Solves

Individuals and advisors often face fragmented financial planning tools that make it difficult to:

- Track financial assets and liabilities in one place
- Plan retirement and long-term financial goals
- Manage family beneficiaries and estate information
- Maintain financial documentation and records
- Prepare tax-related information efficiently
- Monitor financial activities and compliance

LifeArcPlan solves these challenges by offering an integrated financial planning ecosystem that centralizes financial data, planning tools, document storage, and advisory workflows.

---

4. Target Users

Primary Users

- Individuals managing personal finances
- Families planning long-term financial goals
- High-net-worth individuals

Professional Users

- Financial advisors
- Wealth managers
- Tax consultants
- Financial planners

Administrative Users

- Platform administrators
- Compliance officers

---

5. Key Features

- Comprehensive financial dashboard
- Asset and property management
- Retirement and social security planning
- Budget and investment planning
- Healthcare and personal care planning
- Education fund planning
- Tax preparation workflow
- Compliance monitoring
- Secure document storage
- Activity tracking and audit logs
- Lead management for advisors

---

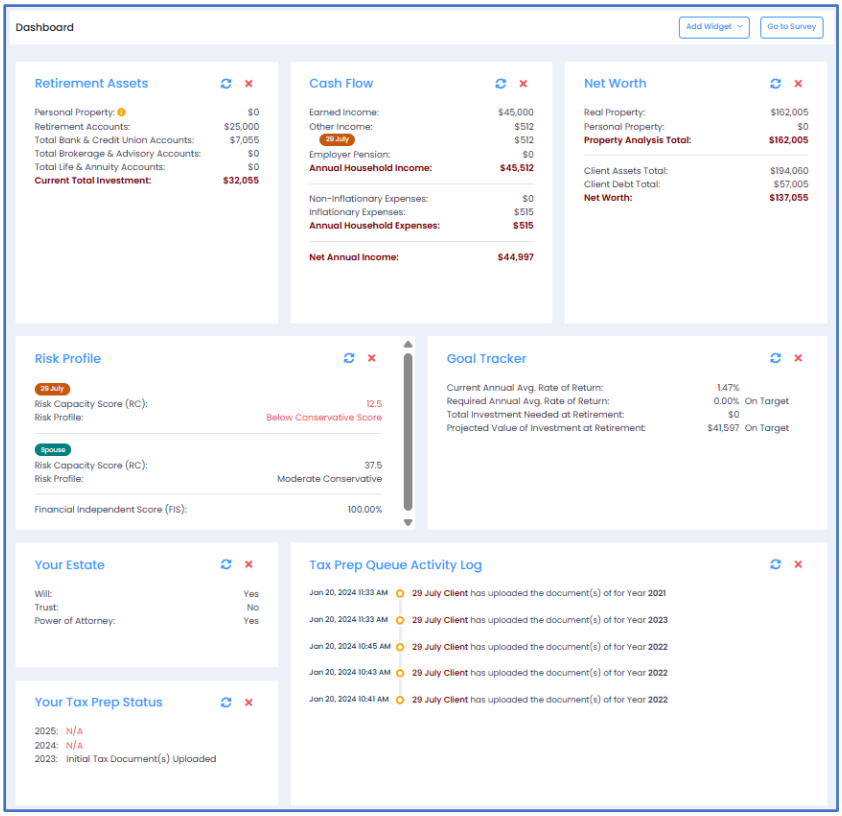
6. System Modules

6.1 Dashboard

The **Dashboard** provides a centralized overview of a user's financial status and planning progress.

Features

- Cash Flow & Net worth summary
- Retirement Assets
- Tax Prep status
- Budget status
- Risk Profile & Goal Tracker



6.2 Personal Property Management

This module allows users to track and manage all personal assets and properties.

Features

- Real estate property records
- Asset valuation updates
- Ownership details
- Property documents storage
- Property depreciation tracking

6.3 Family / Beneficiary Management

Manages family members and designated beneficiaries for financial and estate planning.

Features

- Add family members
- Define relationships
- Assign beneficiaries

6.4 Occupation Management

Tracks employment details and income sources for financial planning.

Features

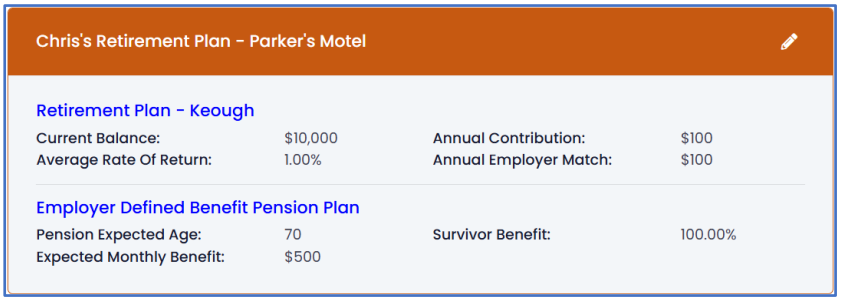
- Employment history
- Income sources
- Salary tracking
- Self-employment income
- Business ownership details
- Career timeline records

6.5 Retirement Planning

Helps users forecast retirement readiness and financial independence.

Features

- Retirement age planning
- Retirement savings projections
- Pension tracking
- Retirement income streams



6.6 Social Security Planning

Supports optimization of social security benefits.

Features

- Social security eligibility tracking
- Benefit projections
- Spousal benefit calculations
- Retirement benefit timeline

6.7 Budget Planning

Helps users understand the current cash flow by adding your budget items

Features

- Investment Items
- Annual Income
- Inflationary items update
- Balance details

Personal Property

Invest in Yourself	Annual amount	Inflationary?	Balance owed	Years till payoff
Primary Residence - White House	$500	Yes	$25,000	5

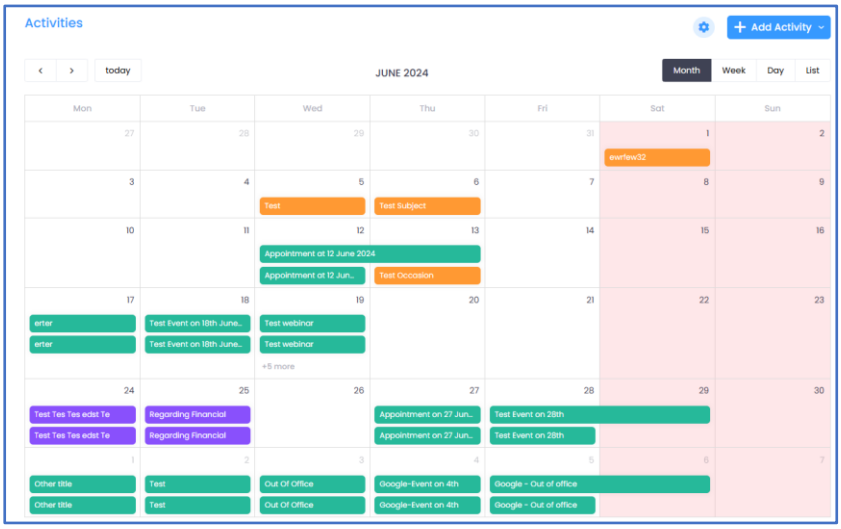
Displays scheduled financial activities and important deadlines.

Features

- Financial planning events
- Tax filing deadlines
- Investment review reminders
- Retirement planning milestones
- Advisor meetings

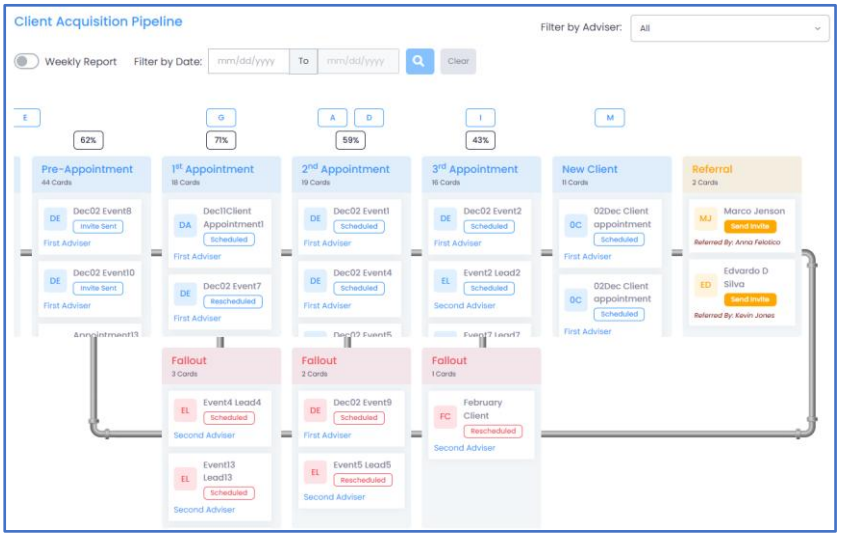


6.17 Lead Pipeline

A CRM-style module designed for financial advisors.

Features

- Lead tracking
- Prospect management
- Client conversion tracking
- Lead status pipeline
- Communication history



---

7. User Roles

Client / Individual User

- Manage financial information
- Plan financial goals
- Upload financial documents
- Track financial progress

Financial Advisor

- Manage client financial plans
- Monitor client portfolios
- Provide planning recommendations
- Manage leads and prospects

Admin

- Manage platform users
- Configure system settings
- Monitor compliance
- Oversee platform activity

---

8. Core Functional Requirements

- Users must securely register and authenticate
- Users must be able to manage financial assets
- Users must track financial goals and projections
- Users must upload and manage documents
- Advisors must manage client portfolios
- The system must maintain activity logs
- The system must support compliance auditing
- The system must manage financial planning workflows

---

9. Tech Stack

Backend

- ASP.NET Core Web API

Frontend

- React
- Bootstrap

Database

- MS SQL Server
- AWS RDS
-

Cloud / Storage / Messaging

- AWS S3
- AWS SNS
